

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strikethrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please CANCEL claims 4, 7, 10, 13, 15, and 23 without prejudice or disclaimer, AMEND claims 1-3, 5-6, 8, 12, 14, 20-22, and 24-28, in accordance with the following:

1. (CURRENTLY AMENDED) A jelly-roll type battery unit comprising:

a first electrode plate having a first electrode current collector with a first electrode tab, and a first electrode active material layer coated on at least one surface of the first electrode current collector;

a second electrode plate having a second electrode current collector with a second electrode tab, and a second electrode active material layer coated on at least one surface of the second electrode current collector; and

a separator that is interposed between the first electrode plate and the second electrode plate, wherein,

the first ~~or the second~~ electrode tab is incorporated into the first electrode current collector, in an area of either the first ~~or the second~~ electrode plate where the first corresponding electrode active material layer is not coated,

~~wherein the first or second electrode tab is formed by folding a cut portion of the first or second electrode current collector toward an upper edge thereof, and~~

the cut portion is at least partially defined by a cut that begins at a lower edge of the first ~~or second~~ electrode current collector and extends along more than half of a width thereof, and

the first electrode tab extends past the upper edge of the first electrode current collector, is disposed at substantially the center of the battery unit, and partially overlaps and faces the second electrode tab.

2. (CURRENTLY AMENDED) The jelly-roll type battery unit of claim 1, wherein the first ~~or the second~~ electrode tab is disposed at a winding start portion of the first electrode current

collector.

3. **(CURRENTLY AMENDED)** The jelly-roll type battery unit of claim 1, wherein the first ~~or the second~~ electrode tab is disposed at a winding completion portion of the first electrode current collector.

4. **(CANCELED)**

5. **(CURRENTLY AMENDED)** The jelly-roll type battery unit of claim 1, further comprising an insulating tape adhered to either surface of the first ~~or the second~~ electrode tab.

6. **(CURRENTLY AMENDED)** The jelly-roll type battery unit of claim 5, wherein the insulating tape is interposed between inner and outer surfaces of the first ~~or the second~~ electrode tab that is folded upward.

7. **(CANCELED)**

8. **(CURRENTLY AMENDED)** A method of winding a jelly-roll type battery unit comprising:

forming a first electrode plate having a first electrode current collector with a first electrode tab formed at a winding start portion of the first electrode current collector, wherein the first electrode tab is formed by folding a cut portion of the first electrode current collector toward an upper edge thereof, and the cut portion is at least partially defined by a cut that begins at a lower edge of the electrode current collector and extends along more than half of a width thereof;

forming a second electrode plate having a second electrode current collector with a second electrode tab attached thereto;

preparing a separator interposed between the first and second electrode plates; and winding the first and second electrode plates together, with the separator interposed therebetween,

wherein the first electrode tab extends past the upper edge of the first electrode current collector, is disposed at substantially the center of the battery unit, and partially overlaps and

faces the second electrode tab.

9-10. (CANCELED)

11. (CANCELED)

12. (CURRENTLY AMENDED) The method of claim 8, further comprising an insulating tape adhered to either surface of the first electrode current collector ~~having the first electrode tab.~~

13. (CANCELED)

14. (CURRENTLY AMENDED) A lithium secondary battery comprising:

a battery unit having a first electrode plate having a first electrode tab, a separator and a second electrode plate of an opposite polarity to the first electrode plate, the second electrode plate having a second electrode tab, sequentially disposed;

a can having a space in which the battery unit is housed; and

a cap assembly connected to an upper portion of the can, and having a cap plate and an electrode terminal connected to the cap plate through a terminal throughhole formed in the cap plate and having a gasket at an outer surface for insulation from the cap plate, wherein,

the first electrode plate includes a first electrode current collector having a first electrode tab formed by folding a cut portion of the first electrode current collector toward an upper edge thereof, the cut portion being at least partially defined by a cut that begins at a lower edge of the first electrode current collector and extends along more than half of a width of the first electrode current collector, and a first electrode active material coated on at least one plane of the first electrode current collector, and

the second electrode plate includes a second electrode current collector with a second electrode tab attached thereto, and a second electrode active material coated on at least one plane of the second electrode current collector, and

the first electrode tab extends past the upper edge of the first electrode current collector, is disposed at substantially the center of the battery unit, and partially overlaps and faces the second electrode tab.

15-19. (CANCELED)

20. (CURRENTLY AMENDED) A jelly-roll type battery unit, comprising:

a first tri-functional electrode unit comprising a first plate having a first electrode current collector with a first electrode tab, and a first electrode active material layer coated on at least one surface of the first electrode current collector;

a second tri-functional electrode unit comprising a second electrode plate having a second electrode current collector with a second electrode tab, and a second electrode active material layer coated on at least one surface of the second electrode current collector; and

a separator interposed between the first tri-functional electrode unit and the second tri-functional electrode unit, wherein,

the separator is interposed between the first electrode plate and the second electrode plate,

the first tri-functional electrode unit and the second tri-functional electrode unit are wound, with the separator therebetween, to form the battery unit,

the first ~~or the second~~ electrode tab is incorporated into the electrode current collector in an area of ~~either the first or the second~~ electrode plate where the corresponding electrode active material layer is not coated, and

the first ~~or the second~~ electrode tab is formed by folding a cut portion of the first ~~or second~~ electrode current collector toward an upper edge thereof, the cut portion being defined by a cut that begins at a lower edge of the first ~~or second~~ electrode current collector and extends along more than half of a width thereof, such that the first electrode tab extends past the upper edge of the first electrode current collector, is disposed at substantially the center of the battery unit, and partially overlaps and faces the second electrode tab.

21. (CURRENTLY AMENDED) The jelly-roll type battery unit of claim 20, further comprising an insulating tape adhered to either surface of the first ~~or the second~~ electrode tab.

22. (CURRENTLY AMENDED) The jelly-roll type battery unit of claim 21, wherein the insulating tape is interposed between the inner and outer surfaces of the first ~~or the second~~ electrode tab ~~that is folded upward.~~

23. (CANCELED)

24. (CURRENTLY AMENDED) The jelly-roll type battery unit of claim 2, wherein the ~~portion of the first electrode tab electrode current collector that is cut and folded upward~~ prevents deformation of the jelly-roll type battery unit.

25. (CURRENTLY AMENDED) The jelly-roll type battery unit of claim 2, wherein material cost of the jelly-roll type battery unit is minimized by forming the cut~~by cutting a portion in~~ of the winding start portion and folding upward to form the first ~~or the second~~ electrode tab.

26. (CURRENTLY AMENDED) The jelly-roll type battery unit of claim 2, wherein the ~~portion of the electrode current collector that is cut and folded upward as the first or the second~~ electrode tab provides for a lower prevents an increase in internal resistance, as compared to due to use of an electrode tab made of a different metals than a corresponding electrode current collector.

27. (CURRENTLY AMENDED) The jelly-roll type battery unit of claim 14, further including a plurality of insulating tapes attached to both surfaces of the first electrode current collector, ~~having an electrode tab incorporated therein to prevent an electrical short-circuit between the first and second electrode plates of opposite polarities during assembling of the~~ battery unit.

28. (CURRENTLY AMENDED) The jelly-roll type battery unit of claim 27, wherein the plurality of insulating tapes are attached to both surfaces of the first~~an~~ electrode tab, to formed by cutting an electrode current collector and folding an end portion of the electrode current collector up prevent electrical short-circuit due to burring of the first electrode tab.
